Appendix A: Listing of Current PCI Values

---

## Introduction

The Town of Monroe retained Vanasse Hangen Brustlin, Inc. (VHB) to perform an updated townwide pavement condition assessment of its roadways. The assessment was completed in early 2023. The Town has made significant investments in roadway improvements in recent years. The improvement in the overall condition of the Town of Monroe pavement network since 2010 has been significant. As will be further explained below, the average “pavement condition index” or “PCI” value in Town has improved from a 64 in 2010 to a 78 today. This level of improvement requires both a commitment by the Town to provide the necessary funding and resourcefulness in how the available funds are used.

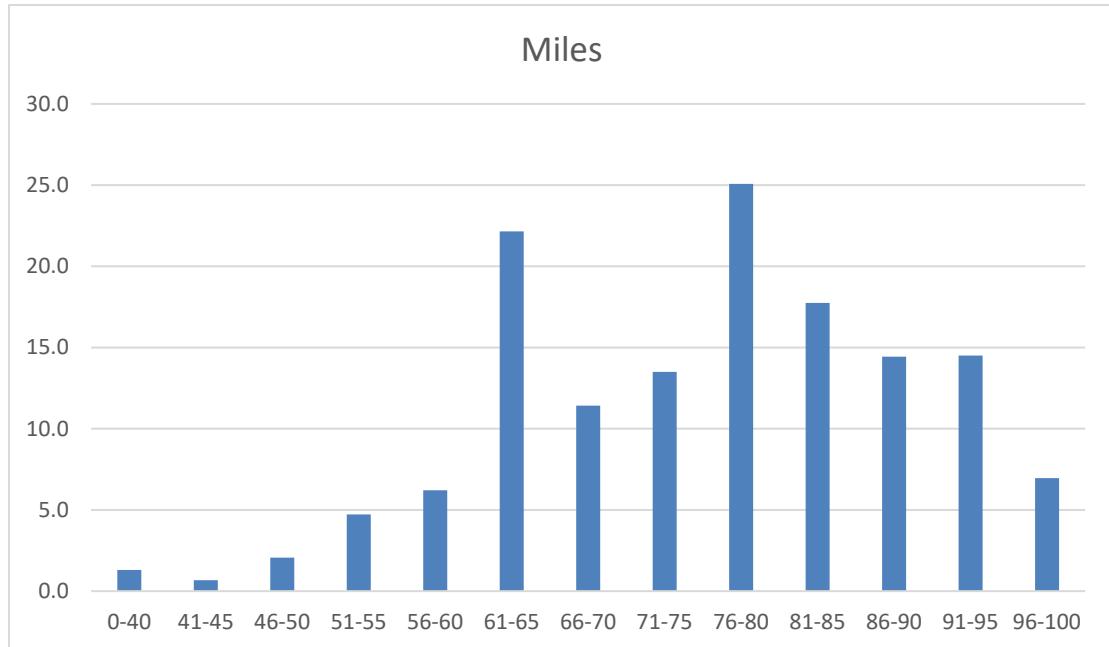

The following report summarizes the current pavement conditions in Monroe, and provides an estimate of future overall pavement conditions, based on different funding assumptions. The purpose of this report is to provide the Town with the information it needs to make decisions with regard to its future roadway maintenance and improvement budget.

---

## Summary of Current Conditions

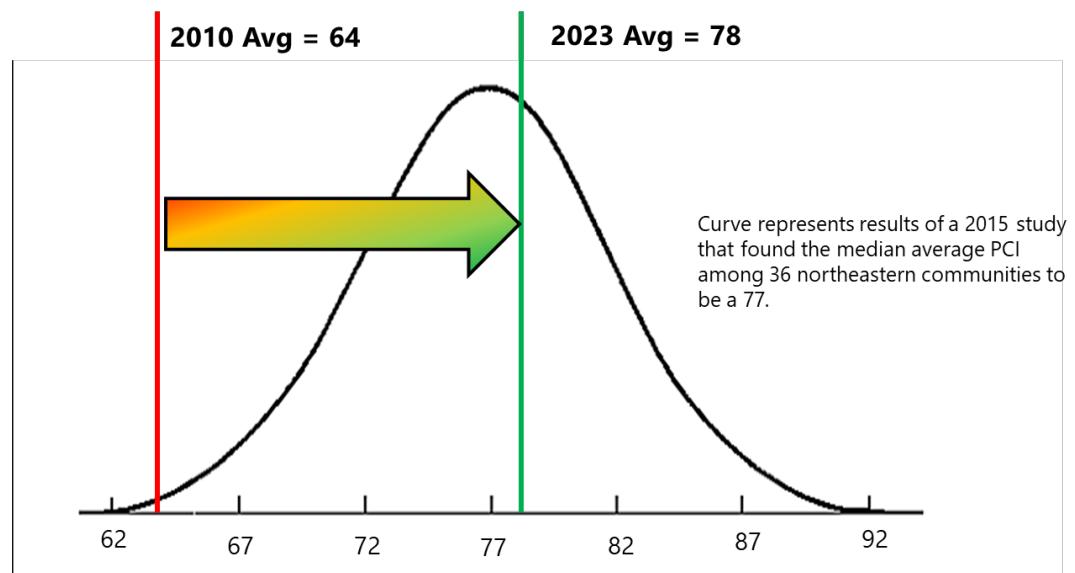

VHB evaluated nine pavement distresses including various types of cracking, surface distortions, potholes, and patching as part of the pavement condition assessment. Based on the observed distresses, a Pavement Condition Index (PCI) was determined for each pavement segment . The PCI is a value between 0 and 100, where “100” represents a perfect pavement and “0” represents a completely failed and impassible pavement. The most recent pavement condition information for the Town of Monroe shows that the network average PCI is 78, which represents an 14-point improvement from 2010. The current distribution of pavement conditions, broken out by 5-point PCI increments, is shown in Figure 1.

**Figure 1      PCI Distribution Chart**

As the chart above shows, there are a significant number of miles of pavement with a PCI above 75. These pavements represent good candidates for some relatively low cost preservation treatments, which typically provide good value in terms of years of service for the dollars spent. It should also be noted however, that there are still a good number of miles with PCI's 75 and below. These pavements typically require some type of resurfacing or rehabilitation.

**Figure 2      Average PCI Comparison Chart**

As another way of measuring the progress made in Monroe in the last 8 years, the chart above compares the average PCI values from 36 municipalities in Connecticut, Massachusetts, and New York to the average PCI in Monroe – both in 2010 and today. In 2010, the average PCI in Monroe was one of the lowest in any community. Today, the conditions in Monroe are slightly above the average of the communities in this group. This level of improvement is significant, and noticeable to the travelling public.

---

## Treatment Bands

Treatment bands are classifications into which similar pavement repairs are grouped for the purposes of planning and summarizing pavement improvement needs.

Treatment bands are defined by PCI ranges. The five treatment bands for roadways in the Town of Monroe are listed below, along with their corresponding PCI range and example pavement repairs. Please note – the PCI ranges provide a general guideline as to the appropriate type of treatment – engineering judgement should be used to determine the final treatment choice for individual road sections.

**Table 1 Treatment Band Descriptions**

| <b>Treatment Band</b>  | <b>PCI Range</b> | <b>Typical Repairs</b>                                      |
|------------------------|------------------|-------------------------------------------------------------|
| Do Nothing             | 93 – 100         | None                                                        |
| Routine Maintenance    | 86 – 92          | Crackseal and patch                                         |
| Preventive Maintenance | 73 – 85          | Double Hima Microsurfacing                                  |
| Structural Improvement | 51 – 72          | Level & Overlay or Mill & Overlay with patching preparation |
| Base Rehabilitation    | 0 – 50           | Cold-in-place and 2" Overlay or Reclamation                 |

---

## Backlog of Pavement Improvement Needs

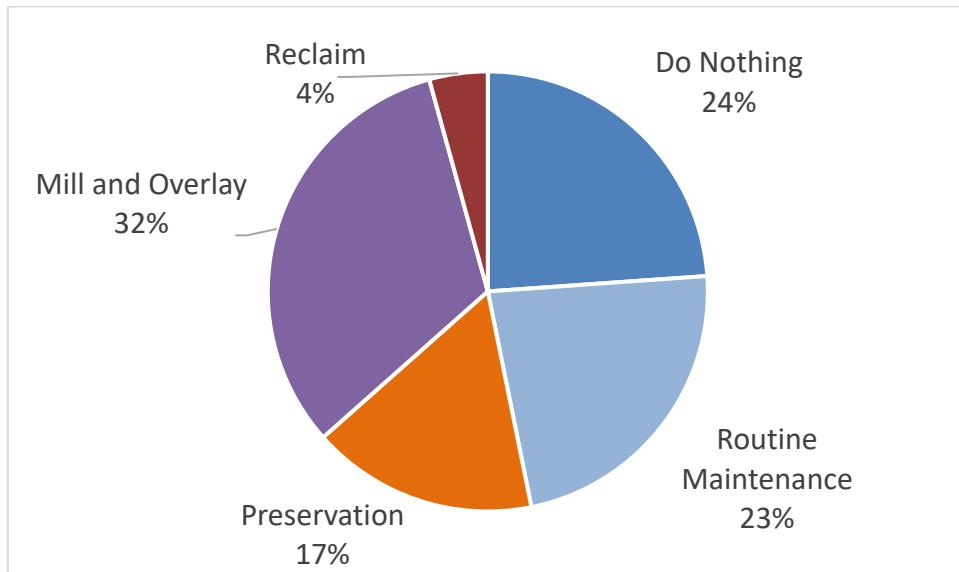

The term “backlog” is used to refer to the total amount of pavement improvement needs on the Town’s road network at a given point in time. Calculating the current backlog of work provides the Town with a snapshot of current needs and gives the Town an idea of the type of repairs it should consider in its current and future plans. The backlog can also be used as a gauge of the effectiveness of the Town’s repair strategy. One of the Town’s goals should be to maintain or to reduce the total repair backlog over time. The current backlog of work required on all Town maintained roads is summarized below, broken out by the treatment bands described above.

**Table 2 Current Backlog of Needs by Treatment Band**

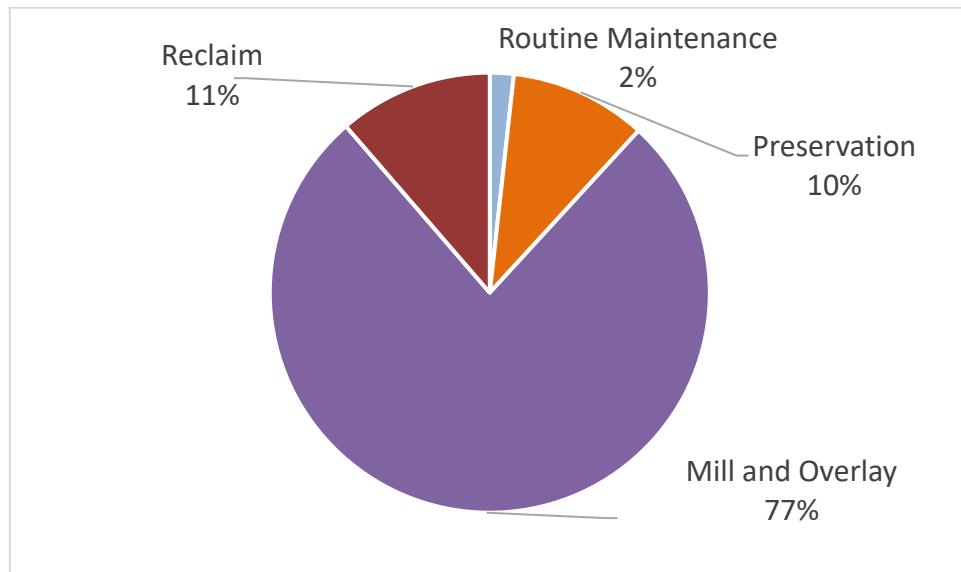

| Treatment band         | Dollar Backlog       | Miles        |
|------------------------|----------------------|--------------|
| Do Nothing             | \$ 0                 | 32.3         |
| Routine Maintenance    | \$ 379,441           | 31.3         |
| Preventive Maintenance | \$ 2,156,321         | 22.5         |
| Structural Improvement | \$ 16,718,017        | 44.1         |
| Base Rehabilitation    | \$ 2,455,702         | 5.8          |
| <b>Totals:</b>         | <b>\$ 21,709,481</b> | <b>136.0</b> |

Figures 2 and 3 below show that while capital improvement needs account for only 36% of the outstanding work by mileage, they represent 88% of the total backlog of work by cost. Also note that approximately 64% of the Town's miles are in need of routine maintenance, preventive maintenance, or nothing at all. While this equates to over half of the outstanding needs in terms of miles, it represents only 12% of the dollars required. This emphasizes the value and importance of performing routine and preventive treatments in a timely manner, to preserve the condition of the Town's pavement network.

**Figure 3 Backlog of Outstanding Work by Mileage**

**Figure 4 Backlog of Outstanding Work by Cost**

---

## Budget Scenarios

The pavement management system uses pavement conditions and characteristics, treatment unit costs, and projected pavement deterioration trends to estimate the effects of various road budget scenarios on the overall pavement conditions over time. As part of the budget analysis process, the software "ages" the pavement using a deterioration curve to predict future pavement conditions.

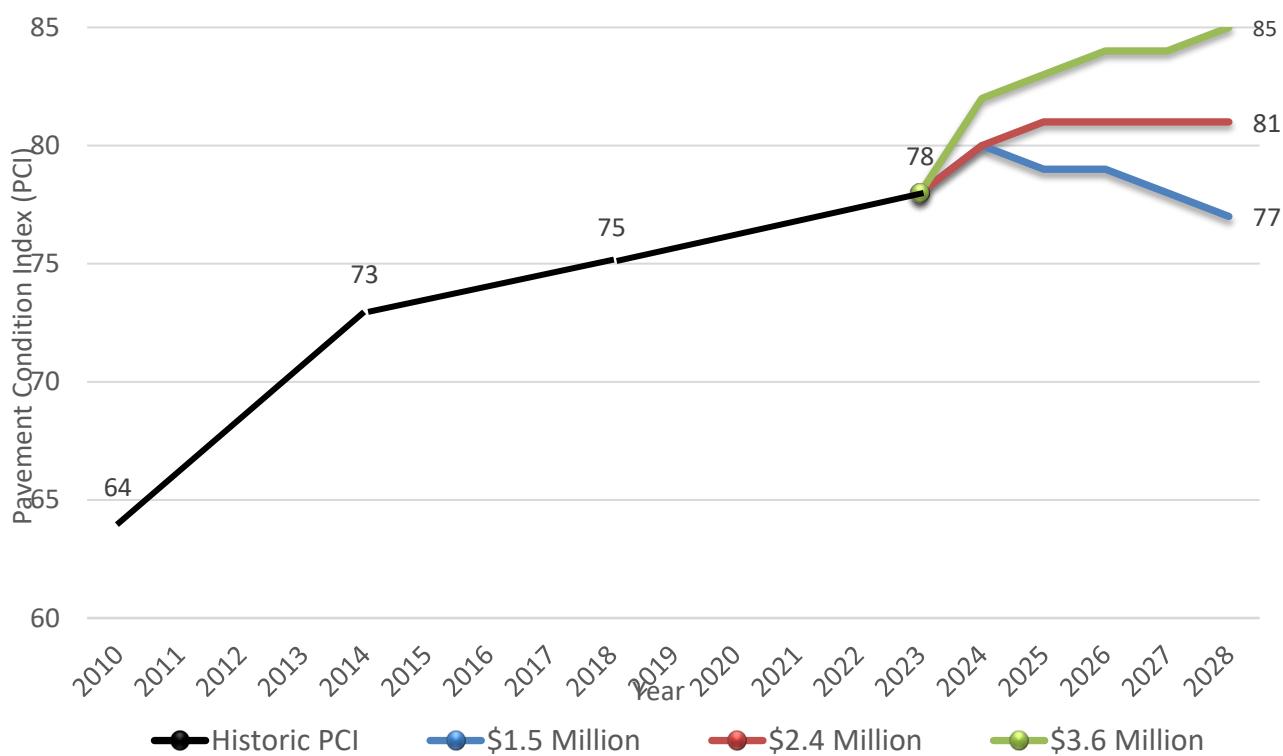

Given the backlog of work described above, VHB compared the effects of the following three budget scenarios on the overall pavement conditions in Monroe over the next five years:

- **\$1.5 Million per Year** – Investing \$1.5 million every year results in a slight decrease in overall average condition after five years.
- **\$2.4 Million per Year** – Investing \$2.4 million every year results in an increase in overall condition to an average PCI of 81 over five years.
- **\$3.6 Million per Year** – Investing \$3.6 million every year results in an increase in overall condition to an average PCI of 85 over five years.

## Budget Analysis Results

The right side of Figure 4, from 2023-2028, shows projected average pavement conditions in Monroe resulting from each of the three potential funding levels. The left side of the figure shows the recorded average pavement condition in Monroe from 2010-2023.

**Figure 5 Future Pavement Condition Projections**

The historic PCIs again show that the average pavement condition in Monroe has improved significantly since 2010. A significant effort was undertaken in 2015 to determine where drainage system improvements were needed. The approach followed since 2015 is to make drainage improvements the year prior to pavement resurfacing, thereby providing a longer life to the pavement improvements.

---

## Concluding Remarks

As mentioned previously, through the commitment of funding, and the resourceful use of that funding, the Town of Monroe has made significant improvement in the overall pavement conditions in Town over a relatively short period of time. The level of improvement realized is something that Town elected officials, staff, and residents should be proud of.

Going forward, VHB recommends that the Town provide funding sufficient to reach the Town's pavement condition goals. It is important that the Town of Monroe continue to prioritize pavement improvement projects that include both capital improvements as well as routine and preventive maintenance treatments that will preserve the condition of roads currently in fair and good condition.

It is recommended that the Town continue the practice of making drainage improvements prior to pavement improvements to provide longer lasting life for the pavement improvements. It is also recommended that the Town continue the practice of performing subsurface sampling and testing to determine the proper treatment for pavement rehabilitation on a project-by-project basis.

Finally, it was noted that there are a number of subdivisions in Monroe that have similar pavement conditions, in the PCI range between approximately 55 to 70. It is likely that these roads will be in need of resurfacing at about the same time. It would be wise to begin planning for these improvements in the near future.

## Town of Monroe Pavement Conditions
